

Air cleaner system

Performance upgrade

Current solution

Cyclone pre-cleaner with 16 mm cyclone cells

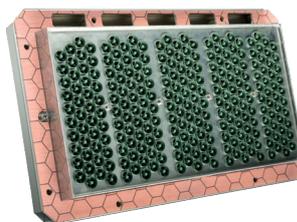

Metal-free air filter element with standard filter media and grip protection net

Reusable sheet metal housing

New solution

New cyclone pre-cleaner with 18 mm cyclone cells enables a higher performance due to more constant efficiency over the complete air flow.

Metal-free air filter element with new filter media offers a higher dust holding capacity. A glue thread reinforcement stabilizes the pleats, alternatively a grip protection net can be used.

Reusable sheet metal housing can still be used when upgrading the system.

100 % compatible – same dimensions – easy to change

Advantages at a glance

- Longer operating time in mission:
Depending on the parameters of the current serial system an increase of filter lifetime between 40 to 100% is possible
- Less service time and lower costs due to longer service life
- Lower life cycle costs
- Higher reliability of the system
